

1.0 - Expected Usage

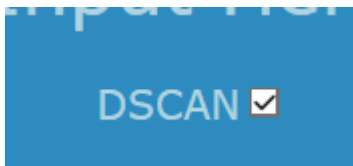

This application is expected to be used in conjunction with data supplied by the videogame Eve Online (CCP Trademarked). It uses mass selected copy and pasted information from the directional scanner and local chat channels within eve online to create an easy to share link in order to inform allies about fleets nearby, their comps and the faction/corporation/alliance they are affiliated with. Extended usage includes passing these shareable links to fleet commanders to formulate a defensive strategy and response based on the fleet composition on the hostile fleet.

1.2 - Example Expected Usage

The following steps blow indicate the intended and expected use and reaction of the application when properly deployed and used by a user. It assumes the user has travelled to the website.

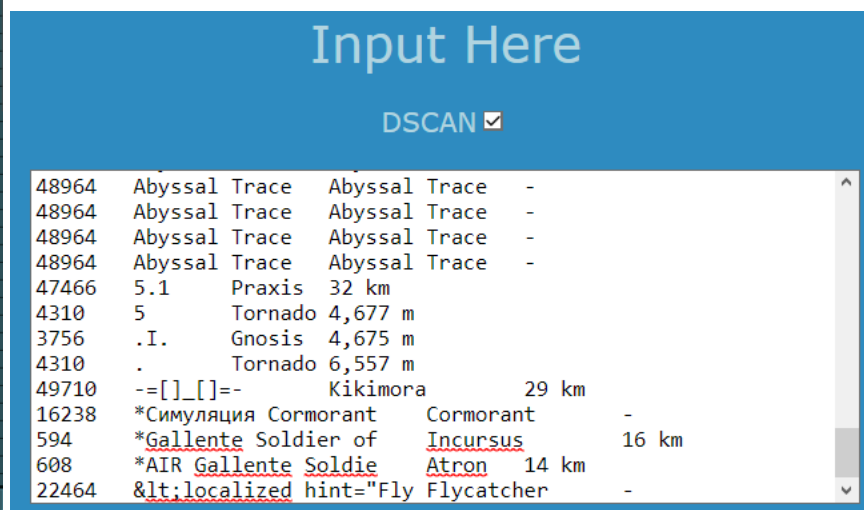

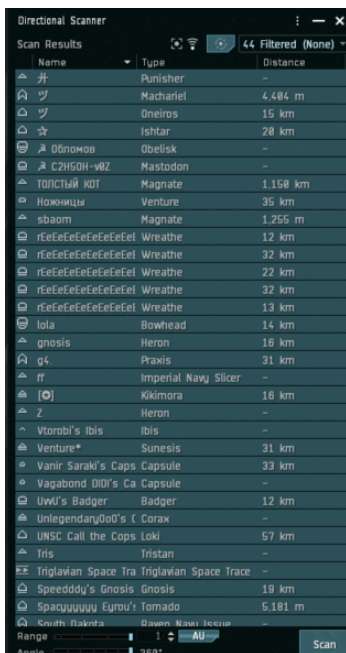

Step 1 - Inputting Dscan Data

Tick the checkbox that sits inline with the DSCAN checkmark option - This will tell the program to read information from the corresponding data input box

Step 2 - Inputting Dscan Data

Within the eve online application, select the contents of the Directional scanner, and copy and paste them over to the DSCAN Labelled input box on the website.

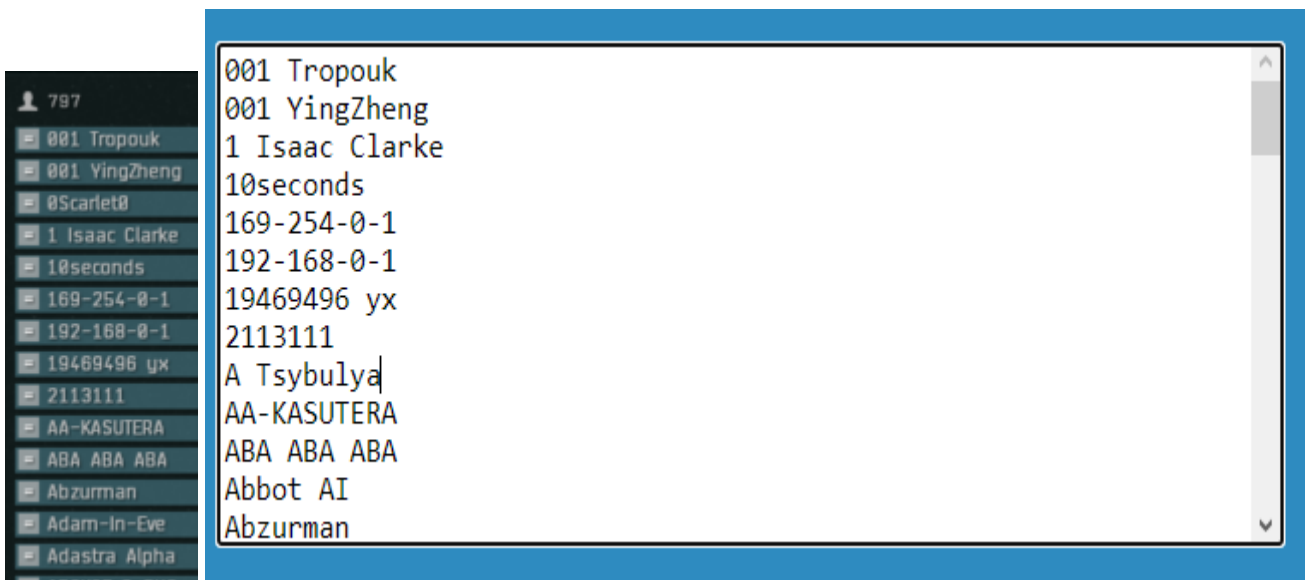

Step 3 - Inputting Local Data

Tick the checkbox that sits inline with the LOCAL checkmark option - This will tell the program to read information from the corresponding data input box

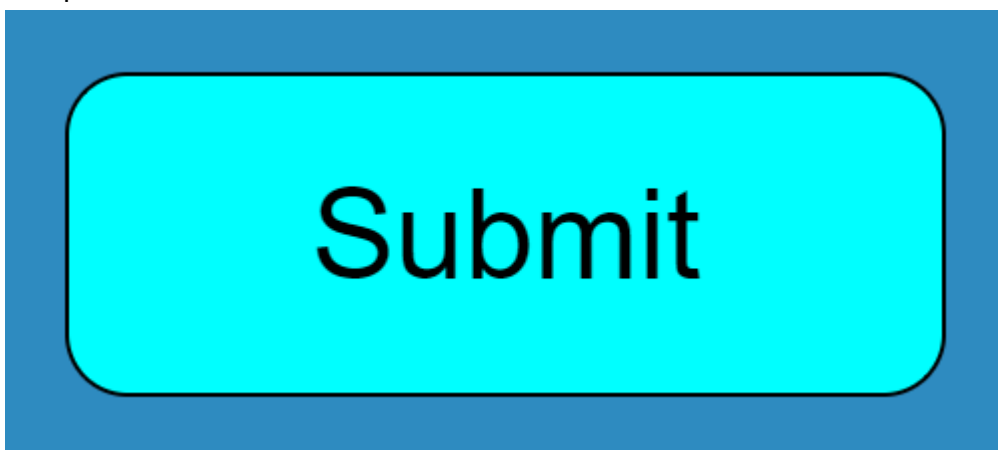

Step 4 - Inputting Local Data

Within the eve online application, select the contents of the Local Chat Member List, and copy and paste them over to the DSCAN Labelled input box on the website.

Step 5 - Press the Submit button

Just press it.

Step 6 - Sharing the link

Select the URL printed out under shareable link, copy it and paste it into an external browser
